

Vijaykumar Majji

Java Full Stack Developer

9398070742 | vijaykumarmajji2@gmail.com | Vijayawada, AP

[LinkedIn](#) | [GitHub](#) | [HackerRank](#)

PROFESSIONAL SUMMARY

Java Full Stack Developer (Fresher) with 6 months of training delivering 2 complete web application modules end-to-end. Proficient in Core Java, OOP, MVC Architecture, JSP/Servlets, JDBC, Hibernate ORM, HTML5, CSS3, Bootstrap 5, MySQL, and Git/GitHub. Strong grasp of SDLC, database design, and debugging — seeking a Software Developer role to build scalable, maintainable Java solutions.

TECHNICAL SKILLS

Languages	Java (Core Java), SQL
OOP & Architecture	Object-Oriented Programming, MVC Architecture, Design Patterns, Session Management
Web Technologies	HTML5, CSS3, Bootstrap 5, JSP, Servlets, HTTP Request/Response Handling
Frameworks & ORM	Hibernate ORM, JDBC, Java EE
Databases	MySQL — schema design, CRUD operations, query optimisation, stored procedures
Tools & Platforms	Git, GitHub, Eclipse IDE, VS Code, Render, Vercel
Core Competencies	SDLC, Debugging & Troubleshooting, Version Control, Agile Awareness, Team Collaboration

PROFESSIONAL EXPERIENCE

Java Full Stack Trainee

Jan 2025 – Jun 2025 | Vijayawada

Codegnan IT Solutions

- Delivered 2 end-to-end web application modules using Core Java, Servlet, JSP, JDBC, and Hibernate — from requirement gathering through to production deployment.
- Engineered MySQL-backed dynamic web pages applying schema design best practices, improving data retrieval efficiency and maintaining high data integrity across all transactions.
- Built and deployed 2 responsive front-end interfaces using HTML5, CSS3, and Bootstrap 5; managed source code via GitHub and deployed production builds on Vercel.
- Resolved critical Servlet-layer defects through systematic logical debugging, reducing issue resolution turnaround within each sprint cycle.
- Implemented session tracking and role-based access control using MVC architecture with clean separation of controller, model, and view layers.

PROJECTS

Employee Management System

Jan 2025 – Mar 2025

Tech: Java, JSP, Servlets, JDBC, MySQL, HTML5, CSS3, Bootstrap 5, MVC Architecture

- Designed and developed a full-stack web portal supporting 3 user roles (Admin, Employee, Viewer) with secure login and HTTP session tracking.
- Built 10+ Admin CRUD operations — view, search, filter, edit, and delete — using dedicated Servlet controllers and optimised SQL queries.
- Applied MVC architecture with clean separation of Servlet controllers, JDBC model layer, and JSP views for maintainable, scalable code.

Banking Application

Mar 2025 – Apr 2025

Tech: Core Java, OOP, JDBC, MySQL

- Built a secure banking application implementing 5 core features: User Authentication, Account Management, Deposits, Withdrawals, Fund Transfers, and Transaction History.
- Applied OOP principles (encapsulation, inheritance, abstraction) to design modular, reusable class structures for account and transaction management.
- Enforced secure coding practices including parameterised JDBC queries to prevent SQL injection, ensuring high data integrity and zero data-corruption scenarios.

CERTIFICATIONS

- Java (Basics) Certification — HackerRank (Apr 2025)
- Problem Solving (Basic) Certification — HackerRank (Jun 2025)
- Java Essential Training — LinkedIn Learning

EDUCATION

B.Tech — Computer Science & Engineering | Usha Rama College of Engineering, Vijayawada

2021 – 2025

Intermediate (MPC) | Narayana Jr College, Vijayawada

2019
